

DHEERAJ BHARAT SETHI

Senior Software Engineer | Platform, Distributed Systems & Production AI

Waterloo, Ontario • (519)-991-7085 • dj.sethi09@gmail.com • linkedin.com/in/dheerajbharatsethi • github.com/dheerix

PROFESSIONAL SUMMARY

Senior software engineer with 14+ years designing and delivering distributed software systems across cloud platforms, production AI, backend services, and modern web applications. Experienced leading end-to-end delivery from architecture through production operations, translating ambiguous product needs into reliable, observable, and maintainable systems. Brings automotive marketplace experience and hands-on healthcare engineering within HIPAA-governed environments.

CORE STRENGTHS

Distributed Systems • Platform Engineering • Technical Leadership • Full-Stack Delivery • Cloud Architecture • Production AI • APIs • Reliability & Observability • Incremental Modernization • Technical Documentation

PROFESSIONAL EXPERIENCE

OPENLANE | Senior Software Engineer — Marketplace, AI & Platform Engineering | 2022–Present

- Led incremental modernization of a legacy Oracle- and Java-based automotive marketplace through cloud-native services and event-driven integrations, enabling new capabilities while preserving production continuity.
- Owned modernization of the Vehicle Detail experience and its backend-for-frontend, aggregating multiple internal services behind a cohesive API and customer-facing workflow.
- Designed and delivered React, Svelte, and Stencil micro frontends and contributed reusable UI patterns that improved consistency across marketplace product surfaces.
- Evolved 'Guardlane' from an isolated AI moderation prototype into an enterprise-grade production system combining ML classification, model evaluation matrixes, LLM fallback routers, deterministic human-in-the-loop review queues, and strict AI governance controls.
- Led AI Upload delivery, integrating validation, AI-assisted content generation, review paths, backend services, and frontend workflows into a real dealer operating process.
- Engineered a comprehensive system-wide migration from AWS SDK v2 to v3 across core marketplace microservices; systematically optimized client initialization lifecycles, reduced deployment bundle sizes, and hardened runtime error-handling pipelines.
- Supported production operations and incident investigations using distributed tracing, logs, metrics, Honeycomb, and OpenTelemetry; converted findings into durable reliability improvements.
- Drove technical discussions, onboarding, design documentation, and cross-functional alignment with product, engineering, data, and operations partners; kept delivery moving during periods when the technical lead was unavailable.

HOLLAND & BARRETT | Software Engineer — Enterprise Search & Commerce | 2018–2022

- Built highly scalable backend services and high-throughput search APIs supporting real-time product discovery across a massive, dynamic enterprise commerce catalog using Elasticsearch aggregations.
- Delivered React and JavaScript interfaces for search, promotions, and price-definition workflows, working across frontend and backend boundaries as delivery required.
- Enhanced complex ANTLR-based business rules and promotion parsing logic, directly mapping merchandising intent to runtime search and transactional commerce behaviors.
- Investigated production issues and collaborated with product managers and globally distributed engineers to modernize business-critical search capabilities.

FOODMESH | Software Engineer — Sustainability Platform | 2016–2018

- Built backend, frontend, and mobile capabilities using Python, Django, React, and Flutter for customer-facing and operational food-recovery workflows.
- Translated lightly specified product needs into maintainable features while collaborating directly with operational stakeholders and distributed team members.

RHEUMERA | Software Engineer — Healthcare Platform | 2014–2016

- Developed workflow-oriented healthcare software using React and Spring Boot in an environment requiring reliable, privacy-conscious, HIPAA-aligned engineering practices.
- Contributed maintainable product capabilities where data handling, correctness, access control, and clear operational behavior were essential.

TECHNICAL SKILLS

Cloud & Platform: AWS, Google Cloud Platform (GCP), Azure DevOps, Lambda, API Gateway, S3, SNS, SQS, Kinesis, Pulsar, Docker, Kubernetes, Terraform, ArgoCD, Azure DevOps, CI/CD

Backend & Architecture: Java, C#, .NET, Node.js, Python, Spring Boot, REST, GraphQL, microservices, distributed systems, event-driven architecture, backend-for-frontend

Frontend: React, TypeScript, JavaScript, Svelte, Stencil, Flutter, HTML, CSS, responsive web development

Data & Messaging: PostgreSQL, Oracle, SQL Server, DynamoDB, MongoDB, Elasticsearch, Kafka, RabbitMQ, Pulsar

AI & Operations: SageMaker, ML workflows, model training and evaluation, LLM integration, human-in-the-loop systems, MLOps, AI governance, Honeycomb, OpenTelemetry, logging, metrics, tracing

Security & Healthcare: HIPAA-aware engineering, authentication, authorization, secure APIs, privacy-conscious data handling

EDUCATION

University of Windsor | Master’s Degree, Electrical and Computer Engineering | 2022–2024

Selected project: designed an image-caption generation system using neural networks and LSTM sequence modeling, trained and evaluated on the Flickr8k dataset.
