Top Skills

Distributed Systems
Artificial Intelligence (AI)
Software Architecture

Languages

English (Native or Bilingual)

Certifications

- 3. Introduction to Project Management
- 3. Tableau Desktop Qualified Associate Certification
- Verified International Academic Qualifications
- 1-Big Data - Hadoop, Spark
- 4. Introduction to Data Analytics

Honors-Awards

Mr. Farewell

Dheeraj Bharat Sethi

Senior Software Engineer | Production AI & Distributed Systems |
AWS | 14+ Years | Yoga Instructor
Greater Kitchener-Cambridge-Waterloo Metropolitan Area

Summary

Software engineering, to me, is more than writing code—it's solving complex problems that continue to work as systems, teams, and businesses evolve. Over the past 14+ years, I've built software across backend, frontend, mobile, cloud, AI, and distributed systems, working with technologies including .NET, Java, TypeScript, Python, AWS, Kubernetes, and modern web frameworks. I enjoy owning problems end-to-end—from architecture and implementation to deployment, observability, and production support. Recently, my work has focused on building production AI systems, including AI guardrails, model evaluation, human-in-the-loop workflows, and cloud-native platforms. I enjoy transforming ideas into reliable production systems that engineers and businesses can trust. What motivates me most isn't a particular language or framework—it's understanding systems deeply enough to simplify them for others. Whether it's reviewing architecture, mentoring engineers, explaining technical concepts, or documenting engineering knowledge, I believe clarity is one of the most valuable engineering skills. Outside engineering, I'm a certified Yoga Instructor. The discipline of yoga has shaped how I approach technology: stay curious, remain calm under pressure, and keep improving through consistent practice. I'm also building Dheerix, a long-term initiative to document software engineering, system design, AI engineering, and technical communication in a way that's practical, visual, and accessible to engineers at every stage of their careers.

Areas of Interest • Production AI & LLM Systems • Distributed Systems & Platform Engineering • Cloud Architecture (AWS) • Backend Engineering & APIs • System Design & Scalability • Technical Leadership & Engineering Communication

I'm always happy to connect with engineers who enjoy building, learning, and sharing knowledge.

Experience

OPENLANE

Software Engineer

March 2023 - Present (3 years 5 months)

Toronto, ON

Building scalable cloud-native platforms and production AI solutions that improve developer productivity, customer experience, and business operations.

Key Contributions

- Led the design and development of production AI initiatives, including AI guardrails for user-generated content using fine-tuned NLP models, LLM-assisted workflows, and human-in-the-loop review systems.
- Modernized legacy platforms by migrating services from monolithic and legacy architectures to cloud-native microservices, improving maintainability and deployment agility.
- Designed and implemented backend services, APIs, and event-driven integrations using .NET, AWS, and distributed messaging systems.
- Built end-to-end features spanning architecture, backend services, frontend integration, infrastructure, CI/CD, monitoring, and production support.
- Collaborated closely with Product Managers, Designers, QA, and Engineering teams to translate business requirements into scalable technical solutions.
- Contributed to engineering excellence through architecture discussions, code reviews, technical documentation, mentoring, and onboarding.
- Participated in production incident response, observability improvements, and continuous performance optimization across critical services.

Technologies

C#, .NET, AWS, TypeScript, React, Svelte, Python, SageMaker, Terraform, Docker, Kubernetes, PostgreSQL, Event-Driven Architecture, REST APIs, CI/CD, GitHub Actions, ArgoCD, Observability, AI/LLMs-

FoodMesh

Full Stack Engineer

November 2022 - Present (3 years 9 months)

Canada

Contributing to technology that helps organizations reduce food waste by connecting businesses, charities, and sustainability partners through scalable digital platforms.

Key Contributions

- Built full-stack applications supporting food recovery, logistics, reporting, and operational workflows across web and mobile platforms.
- Developed scalable backend services and APIs using Python and Django, integrating data from multiple systems to enable reliable business operations.
- Delivered responsive user experiences with React and Flutter, improving usability for internal teams and external partners.
- Designed data visualizations and reporting capabilities that helped organizations measure food diversion, environmental impact, and operational performance.
- Collaborated with cross-functional teams in an agile environment to deliver production-ready features with a focus on reliability and maintainability.
- Contributed across the entire software lifecycle, including architecture discussions, implementation, testing, deployment, and production support.

Technologies

Python, Django, React, Flutter, PostgreSQL, REST APIs, Docker, AWS, GitHub, CI/CD, Data Visualization, Sustainability Technology

Rheumera

Lead Consultant

January 2024 - July 2025 (1 year 7 months)

Led the design and delivery of healthcare software solutions focused on improving clinical workflows, patient management, and operational efficiency.

Key Contributions

- Led full-stack development across React, Spring Boot, and AWS for healthcare platforms serving clinicians and patients.
- Designed and implemented scalable backend services, REST APIs, and modern frontend experiences for patient management, appointments, work queues, and analytics.
- Worked directly with business stakeholders to translate healthcare workflows into secure, reliable software solutions.
- Introduced AI-powered capabilities to improve data interpretation and user productivity while maintaining privacy and compliance considerations.
- Drove technical design discussions, mentored team members, and collaborated across engineering, product, and QA to deliver production-ready features.
- Improved system reliability, maintainability, and deployment processes through engineering best practices and continuous delivery.

Technologies

Java, Spring Boot, React, TypeScript, PostgreSQL, AWS, REST APIs, Docker, CI/CD, Healthcare Systems, AI-Assisted Features

University of Windsor

Graduate Student

September 2022 - January 2024 (1 year 5 months)

Windsor, Ontario, Canada

Generative AI Capstone project Image2Sentence This project focuses on generating captions from images using a generative AI model. It leverages a pretrained VGG16 model for image feature extraction, combined with the Flickr60k dataset for training. The model employs an LSTM network with NLTK for natural language processing and a custom decoder to generate descriptive captions. The application is built with Flask for the web framework and utilizes Keras and TensorFlow for model implementation and training

SGH Holdings Pvt. Ltd.

Software Engineer

May 2018 - January 2024 (5 years 9 months)

Mohali, Punjab, India

Holland & Barrett

Software Engineer

May 2019 - September 2022 (3 years 5 months)

India

Developed enterprise-scale digital platforms supporting millions of customers by modernizing search, promotions, and customer-facing applications across cloud-native architectures.

Key Contributions

- Designed and delivered scalable backend services and modern web applications powering key customer experiences for one of Europe's leading health and wellness retailers.
- Contributed to the modernization of legacy applications into cloud-native, microservice-based solutions, improving scalability, maintainability, and deployment efficiency.
- Built high-performance search capabilities using Elasticsearch, enabling faster and more relevant product discovery across large product catalogs.

- Developed rule-based promotion and pricing engines that supported complex business campaigns while maintaining performance and reliability.
- Collaborated with distributed engineering teams to design APIs, improve system integrations, and deliver production-ready features through agile development practices.
- Enhanced observability, testing, and deployment pipelines to improve software quality and operational reliability.

Technologies

C#, .NET Core, Node.js, React, TypeScript, Elasticsearch, AWS, Docker, REST APIs, Microservices, CI/CD, Azure DevOps

JIVINC TECHNOLOGIES PRIVATE LIMITED

Lead Software Engineer

June 2014 - April 2018 (3 years 11 months)

Solan

At a consultancy firm, I gained exposure to a wide range of technologies while working on diverse projects across web and mobile applications. My experience includes working with PHP frameworks, C# .NET desktop applications, Android development, and Windows mobile apps, allowing me to develop a broad skill set and adapt to various technical environments.

Amisoft

Software Engineer

February 2014 - May 2014 (4 months)

London, United Kingdom

Tata Consultancy Services

ASE

January 2013 - February 2014 (1 year 2 months)

NetSet Software Solutions

Android Developer

March 2012 - February 2013 (1 year)

Chandigarh Area, India

Started of my career @ NetSet Softwares in Chandigarh, developing Android apps

Education

University of Windsor

Master of Engineering - MEng, Electrical and Computer
Engineering · (September 2022 - December 2023)

Amritsar College of Engg. & Tech, Amritsar

Bachelor of Technology (B.Tech.), Information Technology · (2008 - 2012)
